[linkedin.com/in/ayushdhimann](https://linkedin.com/in/ayushdhimann) | [github.com/AyushDhimann](https://github.com/AyushDhimann)

## SKILLS

Python, R, JavaScript, Go, Data Analytics, Machine Learning, NumPy, Pandas, Tableau, LangChain, Fine Tuning LLMs, Vector DBs, Stable Diffusion, Prompt Engineering, NodeJS, ExpressJS, Flutter, Figma, Convex, NextJS, Supabase, Convex, Flask, Network Enumeration, Database Exploitation, Intermediate Pentesting, Dorking, Cloud, Docker, Kubernetes, Linux, Hosting & Deployment w/ scaling, Pipedream

## WORK EXPERIENCE

### Neuralens.ai

January 2025 – February 2025

#### Software Developer

- Developed and optimized Stable Diffusion models in ComfyUI, achieving a 96% reduction in product delivery time for a catalogue of 10,000 items.
- Contributed to DevOps efforts, including API and database integration, to enhance functionality for the client dashboard and increase productivity by 50%.

## PROJECTS

### Boring Brains

November 2024

- Designed a privacy-focused Chrome extension that converts browsing history into a searchable AI-powered timeline while ensuring complete data security.
- Improved query response time by 50% by leveraging SambaNova's Llama model instead of OpenAI ChatGPT 4o-mini to process natural language inputs (e.g., "What was the price of the red T-shirt on Amazon?").
- Engineered the project to be production ready and add support for Docker.

**GitHub**  
**DevPost**

### Fasal

July 2024

- Introduced FASAL FFS, a mobile app empowering 1000+ farmers with direct market access to connect with buyers, secure fair prices, and reduce middleman exploitation. The app features 10+ local languages support and Tau, an animated onboarding assistant for inclusivity.
- Developed Tai, a call bot service designed for farmers with limited smartphone access, providing voice-based guidance and answers.
- Enhanced the platform with features like quality checks, contract farming, and stubble listing to support more than 100 government-led environmental sustainability initiatives.

**GitHub**

### Amazon ML Challenge 2024

September 2024

- Built a vision-based Large Language Model (LLM) solution to predict product dimensions from image datasets, achieving over 80% accuracy on a training set of 300 images.
- Fine-tuned the Idefics2-8B LLM using LoRA on an A6000 GPU. Implemented parallelization for the VLLM.

**GitHub**  
**Hugging Face**

### Axiom

August 2024

- Designed Axiom, an AI-powered platform for personalized interview preparation, enabling over 100 custom tests and immersive interviews based on resumes and job descriptions, with features like real-time feedback, performance analysis, a streak and leaderboard dashboard, and Axiom Stage for spatial audio-based networking.
- Built the platform using Next.js for the frontend, Convex.dev for backend services, LiveKit for spatial audio, Google Gemini for AI-driven test generation, and WebRTC for real-time communication. Deployed on Vercel with authentication managed by Clerk.

**GitHub**  
**DevPost**  
**Demo**

## NotSoBoringNews (NSBN)

August 2024

- Created an AI-powered platform that delivers concise, single-sentence news summaries for time-sensitive productive users.
- Improved news reading time and information absorption significantly by approximately 60%.
- Implemented Supabase for database storage along with Google OAuth in a card layout with the frontend written in NextJS.

## TabViz

March 2024

**GitHub**  
**PyPi**

- Created TabViz, a Python library for Jupyter Notebooks that simplifies data visualization, enabling users to generate interactive visualizations of datasets with just 3 commands for an intuitive and AI-powered experience.
- Integrated Tableau REST API for advanced visualization in under 10 seconds and Google Gemini API for AI-driven insights, ensuring seamless compatibility with Jupyter environments and streamlining data analysis workflows without extensive coding.

## Signify

October 2023

**GitHub**  
**DevPost**

- Developed Signify, a cross-platform AI-powered tool for secure, privacy-focused e-signatures in under 30 seconds without requiring any login. Features include chat-to-document functionality, security insights, smart document completeness checks, biometric authentication, dark mode, and real-time collaboration.
- Built the platform using Flutter for the frontend, Node.js for the backend, and Python for automation. Integrated ChatGPT API for AI functionalities, Dropbox and HelloSign for document signing, and DigitalOcean for server hosting.

## ACHIEVEMENTS

---

University finalists for the Smart India Hackathon 2024

Achieved 647 position on GeeksForGeeks coding platform

Secured 3rd place in Tableau DataDev 2023 Hackathon with TabViz

Finalist in KAVACH 2023 Hackathon for PhishWarden

Placed 4th in Tableau DataDev Spring Hackathon for Traffic Forecast

Completed Hacktoberfest 2022 and 2023

Earned 4888<sup>th</sup> rank in Google Kickstart 2022

## EDUCATION

---

**VIT Bhopal University**

June 2021 – October 2025

Bachelor of Technology, Computer Science Engineering with  
Specialization in Cyber Security and Digital Forensics

CGPA: 6.63

## INTERESTS

---

Gen-AI, Formula 1, Audiophile
